CUNEF UNIVERSIDAD

Quantitative Methods for Humanities

Introduction

2024/2025

Organizational issues

- **E-mail:** abel.guada@cunef.edu
- **Office hours:** Monday and Wednesday 11:00-13:00, either in person or via Zoom (send an email beforehand!)
- **Software:** The course will use R for all computer-based exercises.
- **Evaluation:**
  - Continuous evaluation 40%
    - 5% Quizzes at the end of each module
    - 5% Practice about statistical software.
    - 15% Midterm exam
    - 15% R-based group project
  - Final exam 60%
    - Covers all topics
    - Minimum grade is 5!

Organizational issues

- **Speaking in class**: You can only speak to contribute something to the class or to ask a question. People who disrupt the class will be expelled from the classroom.
- **Mobile phones**: They must remain in the backpack/bag during the class.
- **Laptops**: They can be used for taking notes and for practical class activities.
- **Punctuality**: You cannot enter the classrooms once the class has started.

EVERYTHING is in **CANVAS**

- Exam dates
- Project deadline
- Quizzes
- Teaching material
- Syllabus
- Announcements

Main bibliography

Quantitative Social Science: An Introduction
by Kosuke Imai.

- **Hands-On Learning:** Illustrate concepts with real-world case studies.
- **Software compatibility:** Teaches data analysis using R.
- **Rich Resources:** Includes exercises, datasets, and online teaching materials.
- **Broad Applicability:** Relevant across sociology, economics, and politics fields.

Why study Quantitative Methods?

What is Quantitative Methods?

Definition of Quantitative Methods

Systematic approach of **collecting and analyzing numerical data** to research.

- **Tools of QM:** Statistics, mathematics, programming, data collection.
- **Synonyms:** Quantitative research, numerical research, statistical methods, ...

Common Characteristics of Quantitative Methods

- Use of **measurable data** (e.g., percentages, averages, frequencies).
- Structured and standardized **data collection methodologies** like surveys or experiments.
- Focus on **causality** and **relationships** between variables.
- Deliver **insights** about larger populations out of **representative** samples.

Why to study Quantitative Methods

- **It is the right moment:** Data + Computational revolution
- **It is the right choice:** Data-driven decision making

> In God we trust; all others must bring data.
>
> - William Edwards Deming
