

COURSE:	Quantitative Methods for Humanities	CODE:	G351
YEAR:	2	SEMESTER:	2
EVALUATION:	Project	COORDINATOR:	Abel Guada Azze (abel.guada@cunef.edu)
SUBMISSION DATE:	27/04/2026	WEIGHT:	15%

1. DESCRIPTION AND CONTENT

Project applying course concepts to real-world data using statistical software to study causal relations. Submission by deadline.

2. POINTS AND WEIGHTS

The project final grade is based on a written report. Due to the open nature of the project guidelines, there are not rigid questions with prescribed point values. Rather, written reports are evaluated in terms of the following key concepts:

RUBRIC FOR THE PROJECT WRITTEN REPORT
TOTAL OF 10 POINTS

CONCEPT	DESCRIPTION	WEIGHT
Causal Inference	Treatment/control, outcome, randomization or identifying assumption, and appropriate comparisons.	25%
Interpretation	Direction, magnitude, substantive meaning, limitations, and conclusions.	30%
Code Quality	Readable, reproducible R code, correct variable construction, and code that runs without errors.	20%
Report Clarity & Organization	Well organized, concise, readable tables/figures, and polished writing.	25%

3. EVALUATION METHOD AND CRITERIA

The grade of each concept is chosen to reflect the degree of correctness and understanding of the students' performance according to the following criteria:

- **0-25%:** Many errors, typos, misconceptions; implies minimal understanding; no justification.
- **25%-50%:** Mostly incorrect or incomplete; shows some understanding but with major errors, gaps, and weak conclusions.
- **50%-75%:** Partially correct and complete; shows a fair understanding of the concepts.
- **75%-100%:** Mostly correct and complete; strong understanding and sound conclusions; minor to no errors.
